Investigative Research on the Net - Part One

Duration: 1 day

Description:

The Investigative Research on the Net courses unmask the hidden aspects of the Internet, enabling staff to get more from the Internet than they ever dreamed possible. Part 1 concentrates on information research. It takes delegates beyond simple Googling, introducing a wide variety of online sources, research techniques and technical tools. It also equips researchers to spot and avoid the various hazards and pitfalls of Internet research.

Who it's for:

Journalists, researchers, programme makers and anyone whose role involves professional use of the Net for research purposes.

Aims:

To teach researchers good practice and how to overcome the various pitfalls of the net. The course enables delegates to learn advanced search techniques, make an informed choice of search engine, evaluate websites and their provenance.

Outline:

- Alternative research resources harness the power of weblogs; streaming media; newsgroups; chat rooms; peer to peer; message boards; specialist directories
- Under the bonnet how the Internet works explained in plain, simple language.
- Identify the pitfalls many factors can undermine research. Information could be out of date, poorly researched or driven by unseen agendas. Some sites are outright hoaxes. This part of the course highlights the dangers and shows how to overcome them.
- The science of searching using the best technique and the appropriate search engine for each research task.
- Showing Google who's boss! How clever keyword selection, correct syntax and cunning lateral thinking can produce amazing search results.
- Advanced research the specialist tools that hide beyond the search engine's front page.
- Provenance methods for identifying the owners of websites and evaluating sites.

Prerequisites:

Attendees should be familiar with the World Wide Web and be able to conduct basic searches.

Investigative Research on the Net - Part Two

Duration: 1 day

Description:

The Investigative Research on the Net courses unmask the hidden aspects of the Internet, enabling staff to get more from the Internet than they ever dreamed possible. Part 2 explores how clever use of online technology can help investigate people and organisations. Delegates will learn how to exploit online communities, dig behind the scenes of a website and go undercover online without being detected. Plus techniques for evaluating the reliability of websites.

Who it's for:

Journalists, researchers, programme makers and anyone whose role involves finding people or serious investigative / covert research.

Outline:

- Provenance and beyond reveal the owners of amateur websites; access a professional website's domain name registration; uncover the different sites owned by an organisation or individual; access web archives and historical domain registration details
- Detective work combine information gleaned from various technologies to help trace people, uncover hidden information and build up a dossier on an investigation. This part of the course uses genuine research examples to illustrate investigative techniques
- Ethics and online espionage use hidden technology to locate individuals via email; stay undercover during covert investigations; discover tools that extract hidden images stored on web servers; ensure compliance with BBC guidelines relating to undercover and obscene material research
- Using online communities best practice and effective use of message boards. Find guests, experts, opinions and informally disseminated information

Prerequisites:

Attendees should be comfortable with online research and ideally will have attended part one of this course.

			Reporters			Editors			Producers	1
Training Modules	Timing	Day 1 Essential	Month I Scrutch vel	Months 1-3 Useful	Day 1 Essential	Month 1 Requested	Months 1-3 Useful	Day 1 Essentiat	Month 1 Required	Months 1-3 Useful
Module 1: DTI - For Reporters and Editors	I Day	x	I	[x			I		
Introductory presentation to show broadly how the system works, taking us from reported opening and creating story file, through to design and final production. Aim of presentation is to highlight best practice workflow, why certain protocols are vial/important, and to bring all participants (who will include reporters, commissioners and producers) to a basic level of understanding, breaking down silo mentahity of people only understanding what is immediately relevant to their part of the production process. The main part of this session focuses on the functionality within inCopy, specifically for Reporters and Editors Module 1: DTI - For Producers [including Advanced newspaper design]	2.5 Days							X		
Infoductory presentation to show broadly how the system works, taking us from reported opening and creating story file, through to design and final production. Aim of presentation is to highlight best practice workflow, why certain protocols are vita/important, and to bring all participants (who will include reporters, commissioners and producers) to a basic level of understanding, breaking down silo mentality of people only understanding what is immediately relevant to their part of the production process. The main part of this session focuses on the functionality within inDesign, specifically for Producers, including key skilts required to produce basic layouts from a design perspective.										
Module 2: Media Mogul [Presenter: Sarah Colthorpe & Himesh Patel]	C	I	ſ	[[]		······································	L		[]
A one-hour overview of Media Mogul that includes a demonstration of how to log in and search for pictures in both the library and the desk, and how pictures are sent to DTI. It should answer the following questions: What is Media Megul Dam versus Media Megul Picture Desk? Why is it calted Picdar in drop down menu? How do I find pictures in the library? How do I find pictures in the library? Do we own the pictures in the library? Do we own the pictures in the library? Why do some have pound signs beside them? Top tips for searching Searching for wire pics Where else do we get pictures fron? How pics get from media Mogul into DT1.										
Module 3: Internet as a user [Presenters: Ian Douglas & Emma Henry]	2 HOURS		[
A presentation on how to get the most out of your internet browser and our own website. The presentation should focus on explaining the messages that appear on our servers, derivstifying language and finding your way around. It should cover such things as: Why am i being invited to download Flash' And should 1? And how do 1? Why ean't i see the World Cup map? What exactly are pop-ups and do I want to block them? Can I have iTunes on my computer? Wily some things play in media player and others play in browser. A Cook's tour of our website What does xml mean, and what is it? What is a URL? How do I save favourites, organise favourites?										
Module 4: Introduction to MS Office [Presenter: Hestor]]				
An overview of Word. Excel and PowerPoint and how they might be used relevantly for theiroles involved with the pilot. For example Editors might not use the numeric elements for Excel, but could be using it for planning rotas, project planning etc. Similarly, basic PowerPoint might be useful to helps demonstrate or visualise ideas that need to be shared with collequest etc. The templates available on the Microsofi site should be 'showsaed' and used as examples of what is available to help, rather than staring from scratch. The emplatish here should be very much on basic understandings, followed up with some praticial assignment/stuggestions that allow users to explore the programmes for themselves, and identify how/when they might be useful to themselves.										
Module 5: Advanced Guide to the Internet [Presentors: Ian Douglas & Enuna Henry]	2 HOURS		1	I		[I	I]]
This module would aim to stimulate the user to go and explore the web and develop there own selection of favourites and reference sites. It should outline some suggested 'Great site to visit' and include areas like blogging sites, aggregators and RSS feeds. For active users this session should allow picnty of feedback into the group with recommendations etc and for less frequent 'surfers' this is the chance to demystify the web and really understand what is available. An output from the session should be a group 'library' of recommended sites and some initial blogging activity for the new test site.										
Module 6: Use of the Pilot web site Presenters: Ian Douglas & Emma Henry		[]	1	1]
An overview of the mechanics of the Pilot site, explaining how to upload a basic story with pictures. What makes good copy online and any basic text styling requirements that people need to be aware of. This module should also include any essential housekeeping points that people need to be aware of - best practice should start here. This module should also highlight the importance of cross media signposting to ensure that a newspaper based story can potentialfy be enhanced (e.g. more background, greater detail, more pictures etc) online, or indeed what starts as an online story can also point towards the following day's newspaper for comment and analysis by named Leader writers or experts.										
Module 6a: Detailed use of Pilot web site Presenters: Ian Douglas & Emma Henry}	1	I	T]	Т	1		I	Ì]
More detailed look at the admin site, showing in detail the upload options and most mportantly, spending time actually using the site.										

For Distribution to CPs

Example exercises to be included here to ensure full knowledge of the site and the admin functionality.

Module 7: Writing for the web.	1 HOUR	 ſ				[
[Presenter: Share Richmond]							
This module should cover the basic characteristics of the web and the considerations that should be made as a consequent when looking to engage with readers/users. This should include: The principles of hyper linking, non linear structures etc Good and bad examples from the web How do neople use the internet (browsing, jumping around following links etc] Psychology of reading on a screen vs newsprint Writing articles for the web, especially headlines and choosing the correct headline type c.g. cliffhanger Combining text, pictures, audio and video							
Again, this module should include exercises with relevant feedback.							
Module 8: Handling photos and basic Photoshop [Presepter: Sarah Colthorpe & Himesh Patel]		 L	[]		 		
Following on from Media Mogul module, this will give a broad overview of how to handle photographs covering: copyright and costs; preparing pix for web use; attaching pix to story media; how to send pix for processing; ordering special effects (out-outs, bus outs etc); assessing quality.	a						
Module 9: Media convergence – what's it all about? [Presenter: Dietmar]	3 HOURS	 1					
This module aims to highlight the variety of media sources and devices that are now available to our traditional readers, and therefore the importance of engaging with them i 'new' ways.	n						
Again, this module should include exercises with relevant feedback.							
Module 10: Introduction to audio for the web [Presenter: Jonathan Halls - BBC]	4 HOURS	 1			 		
An overview of the development of audio and podeasts in the media market. How the audience uses podeasts (situations, favourite content etc.) and who are typical users. When does it make sense to use audio as a (additional) format to tell the story, i.e. what makes p story worthy of being "Heard" More specifically this should include: Usage slatistics around the world							
Usate partistics adound the world Best practice and examples Writing for audio – basic principles							
Basie dos and don't and key 'niles'- e.g. talking speed, use active language not specialis terms, not referring back to people in case their names are edited out at a later stage etc.	t						
Different styles on audio for News, Sport. Comment etc e.g. length and structure of 'article'							
Finally this module would cover how to produce audio content in an easy way and how to publish it to the web site. An important element of this module will be exercises, with relevant feedback.	c						
Mothule 11: Introduction to video (Presențer: Howard Elston?)		 1		I	[[]
Module 11: Introduction to video [Presenter: Howard Elston?] An overview of the development of video for the web and vodeasts within the media market; How the audience uses video (situations, favourite content etc.) and who are typical asers of web based video content. When does it make sense to use Video as a (additional) format to tell the story i.e. what makes a story worthy of being 'Seen and Heard'] More specifically this should include: Usane statistics around the world Best practice and examples Writing for video – basic orniciples Basic dos and don't and key 'rules' - e.g. talking speed, how to siv/look/stand, orientare the viewer, keep a pause after finshinit; your speech to entera etc Different styles on video for News, Sport.
